Novelty (N)	Claims <u>30-33</u>	YES
	Claims <u>1-29</u>	NO
Inventive Step (IS)	Claims <u>30-33</u>	YES
	Claims <u>1-29</u>	NO
Industrial Applicability (IA)	Claims <u>1-33</u>	YES
	Claims <u>NONE</u>	NO

**2. CITATIONS AND EXPLANATIONS**

Claims 1-29 lack novelty under PCT Article 33(2) as being anticipated by Carlsson (WO 01/10080 A2).

In claimss 1-29, Carlsson discloses, in fig. 1, a method of wireless communication comprising monitoring a first network (monitoring packet switched network 20) in accordance with a first air interface (SGSN 22); and receiving a message ( receiving a notification message) from a second network ( circuit switched network 30) being associated with a second air interface ( associated with gateway 34) different from the first air interface ( gateway 34 is different from SGSN 22). See abstract.

Claims 30-33 meet the criteria set out in PCT Article 33(2)-(3) because the prior art does not teach or fairly suggest transmitting from the subscriber station to a second base station controller a request for an identifier to support communications with a packet switched network after the subscriber station moves into the second geographic region.
